Information Systems Resources Achieves Industry Certifications

IT Asset Management Firm Certified as Environmentally Responsible Recycler

DEARBORN, Mich. Oct. 18, 2012 - Information Systems Resources (ISR), a leading provider of services and products designed to build and manage computer network infrastructures, today announced it has been certified for the rigorous R2 and ISO 14001 standards which are awarded only to companies managing resources in an environmentally responsible manner.

ISR is a leading recycler of retired electronic equipment, helping businesses handle unneeded inventory in a secure, environmentally aware fashion. ISR also remarkets useful components that can be repurposed for additional use while disposing of unusable material in accordance with EPA regulations.

Jointly developed by the Environmental Protection Agency, manufacturers, recyclers and trade groups, R2 is the de facto standard adopted by the industry to recognize quality, responsible recyclers. The ISO 14001 certification addresses various aspects of environmental management and provides practical tools for companies seeking to control their environmental impact and improve their environmental performance.

“We are proud to have earned recognition within the industry through the prestigious and challenging R2 and ISO 14001 certifications,” said Information Systems Resources CEO Luther Elliott. “Our company has always believed that in order to be a good corporate citizen it’s imperative to operate in a thoughtful, environmentally appropriate manner.”

“Certification of R2 and ISO 14001 standards is a tremendous acknowledgement of our responsible business practices,” stated ISR Chief Operating Officer James Grutza. “The companies with which we conduct business can do so with the greatest confidence, knowing we respect the environment and engage in approved business practices.”

About Information Systems Resources

Information Systems Resources (ISR) offers specialized computer solutions to Fortune 1000 companies.
